

Polish Payment Processing Leader chooses Auriga software to manage Polish ATM fleet.

ITCARD selects Auriga to provide single multivendor ATM software platform.

BARI, ITALY 15th February 2024

Auriga, a global software provider for the omnichannel banking and payments industry, today announced [ITCARD](#), the Polish leader in processing ATM and electronic payment transactions for banks and financial institutions, as new customer for its multivendor ATM management solution. This will enable ITCARD to optimize operational and technology costs while improving systems availability and the time to market for new services.

The solution will be delivered by **Auriga Poland**, which was formed following Auriga's acquisition of the **majority shareholding** in Polish banking technology leader [F1 Solutions](#).

ITCARD is the biggest financial transaction processing company in Poland and supports all areas of payment management across cards, ATM and POS terminals. The company operates ATMs and cash recyclers for major banks as well as running its own Planet Cash ATM network with over 4400 devices across the country.

In the running of its ATM network, ITCARD wanted to achieve better performance and greater cost effectiveness by migrating to one software platform that could work across its ATM fleet. The company chose Auriga because its [ATM management software solution](#) offers **true multivendor ATM management** and is customised for the Polish market through Auriga's central and Eastern European subsidiary, Auriga Poland.

In a multi-year programme, the whole fleet of around 7,000 ATMs in ITCARD service will be transitioned to the Auriga solutions supported by Auriga's team based in Poland.

“We are delighted to be realising ITCARD's vision for modernising how their large multivendor ATM fleet is managed and developed. Partnering with Poland's leader in payment processing is testament to how our international growth 2 strategy is succeeding with our investment in Auriga Poland and their local capabilities in software development and support.”

said Vincenzo Fiore, CEO, and Founder of Auriga

ITCARD will be deploying Auriga Poland's TPS suite, which is hardware agnostic, highly adaptable and complies with the NDC/DDC environment/infrastructure, manages all self-service operations optimally with full insight. The software is designed to accelerate innovation through personalised customer experience and adaptable development technology. It provides full support for processing all transactions and processes including withdrawals, cash-in, goods and services, etc., as well as cash management and active monitoring.

“In developing our ATM network, the priority was to achieve better efficiency and cost effectiveness by moving to a single software platform that could support the entire ATM fleet. We chose Auriga because of its advanced ATM management software, which enables effective management of equipment from many different vendors. We are convinced that this decision will contribute to increasing the efficiency of our ATM network, and cooperation with Auriga will allow us to better meet the expectations of our customers. The first 250 recyclers of the 7,000 devices processed by ITCARD are already operational, using software provided by Auriga.”

said Jarosław Chrzanowski, CEO,
ITCARD

About ITCARD

ITCARD offers modern solutions in payment services, cards, and ATMs. The company provides outsourcing services in the processing and handling of payments for banks and financial institutions in online internet transactions, ATMs, cash deposit machines, payment terminals, payment applications, payment cards, 3D Secure authorisations, Dynamic Currency Change, and mobile applications.

ITCARD enables businesses and consumers to withdraw and deposit cash at ATMs, process payments at payment terminals, make online 3D Secure ACS transactions and make payments using mobile applications. The ITCARD Group operates its own network of Planet Cash ATMs and Planet Pay POS terminals. The Group also performs its services and operations in Croatia and the Czech Republic.

About Auriga

Auriga is a leading supplier of software and technology solutions for the banking and payments industries, and a specialist provider of innovative omnichannel solutions to banks and other financial institutions. Its solutions, deployed on over 74% of Italian ATMs, are founded on a modern technology architecture and improve time to market for new services while lowering costs, protecting critical devices from cyberattacks, and building long-term competitive advantage. Auriga is a global company with a direct presence in Italy, UK, Spain, Belgium, Poland and Mexico, and expanding operations in Western and Eastern Europe, Latin American (LATAM) and Asia-Pacific (APAC).
